Thyrofest-2016

Thyrofest 2016

The thyroid gland and its disorders constitute a vast subject of study. The management of thyroid disorder sare topics of widespread debate worldwide. Dealing with thyroid disorders requires a complete understanding of the anatomy, physiology and pathology of the gland. There still remains the need for establishing consensus on the management of thyroid disorders in the light of ever accumulating evidences.

Thyroid surgery incorporates an interplay of surgical complexity, appropriate decision making and aesthetic principles. Complete preservation of delicate structures is the cornerstone of thyroid surgery. In differentiated thyroid cancer, judicious management of central and lateral compartment lymph nodes has evoked considerable debate.

We are pleased to announce the three days workshop on Management of Thyroid Disorders on 4th-5th-6th March, 2016. This event will include live surgical sessions, instructional surgical videos, panel discussions, lectures and pre & post forum assessment of trainee surgeons & hands on cadaveric dissection of thyroid.
